

Habitat

Made right here in the US, Habitat combines Moore & Giles scrap leather with a water-based blend of FDA approved, plant-derived ingredients. This mixture is pressed and dried into sheets, resulting in a final product suitable for leather accessories and upholstery. Producing Habitat in its most natural state further reduces its environmental footprint, and due to the variety of the scrap leather, each lot offers a uniquely colorful representation of its circularity. Habitat is proof that the scrap heap doesnâ€™t have to end up in the landfill.

Natural

Features

- Manufactured domestically
-
- Composed of recycled leathers
-
- Suitable for accessories and upholstery needs
